General, Organic and Biological Chemistry By H. Stephen Stoker

This text, aimed at nursing and other allied health majors, boasts a clear, comprehensible writing style and a pedagogical approach that is easy to apply and use. The early chapters of the text focus on fundamental chemical principles. Later chapters, built on the foundation of these basic principles, develop the concepts and applications central to the fields of organic chemistry and biochemistry.

The development of chemical topics always starts at the ground level. Complicated mathematics is minimized and used only when it helps clarify a topic. The text's pedagogy is supported by strong graphics, features that help students learn and retain material, and rich problem sets.

- *New!* The web site features a student math review that covers the prerequisite mathematics relevant to this course.
- *New!* The HM ClassPrep CD-ROM features everything an instructor needs to develop lectures. This cross-platform CD includes PowerPoint slides with all text figures, tables, and virtually all photos; Animations and simulations from the Hart, *Organic Chemistry*, 11/e and Zumdahl, *General Chemistry*, 6/e CD-ROMs; "Chemistry at a Glance" sections; The Instructor's Resource Manual in PDF format; Word files of the printed Test Bank
- *New!* The text's art program has been thoroughly revised to help students better visualize the molecular world. The text includes many space-filling models that more closely match what students see in multimedia resources. Reactions are conveniently color-coded in the organic chapters.
- *New!* Every chapter now includes new "Additional Problems," giving current users a fresh selection and expanding the range of difficulty in this popular problem category.
- *New!* Additional "Chemistry at a Glance" sections provide brief visual summaries of core chapter concepts to help students visualize difficult material.
- *New!* Additional "Chemical Connections" boxes show chemistry as it relates to everyday life, highlighting its relevance to careers in the health and environmental fields.
- *New!* The author reviewed and improved coverage of the following topics to make the new edition as current as possible: Solubility of solutes in water; Chemical effects of radiation; Oxidation and reduction as applied to organic

molecules; Dietary considerations and carbohydrates; Dietary considerations and fats and oils; Classification of lipids in terms of function; Classification of proteins in terms of structural characteristics; Functions for vitamins; Protein synthesis and human genome project results; Genetic engineering; Oxidative phosphorylation and ATP production

- Chapter outlines give students a road map of what is covered in each chapter.
- In-text worked-out examples walk students through the thought process involved in problem solving. A "Practice Exercise" follows each example to reinforce concepts.
- "Margin Notes" provide tips for remembering and distinguishing between concepts, highlight links across chapters, and present interesting historical background.
- "Defined Terms" are highlighted in the text when they are first presented, using boldface and italic type. Each definition appears in a complete sentence so students are never forced to deduce a definition from context.
- A glossary offers definitions of all key terms in the index.

Editorial Review

About the Author

Stephen Stoker of Weber State University in Ogden, UT, has taught the gamut of introductory chemistry courses, specializing in GOB, for the past 30 years. Weber State has a very large Health Professions school, and GOB is geared at students with little or no experience in chemistry (notably Allied Health and Nursing majors).

Users Review

From reader reviews:

Jason Villalobos:

Hey guys, do you desires to finds a new book to see? May be the book with the name General, Organic and Biological Chemistry suitable to you? The actual book was written by well known writer in this era. Often the book untitled General, Organic and Biological Chemistry is the one of several books in which everyone read now. This book was inspired many men and women in the world. When you read this guide you will enter the new age that you ever know prior to. The author explained their idea in the simple way, consequently all of people can easily to be aware of the core of this guide. This book will give you a lot of information about this world now. To help you see the represented of the world on this book.

Lidia Flynn:

Typically the book General, Organic and Biological Chemistry will bring one to the new experience of reading some sort of book. The author style to spell out the idea is very unique. If you try to find new book to see, this book very suitable to you. The book General, Organic and Biological Chemistry is much recommended to you to see. You can also get the e-book through the official web site, so you can easier to read the book.

Donna Layne:

Are you kind of busy person, only have 10 or maybe 15 minute in your moment to upgrading your mind proficiency or thinking skill possibly analytical thinking? Then you are having problem with the book compared to can satisfy your short time to read it because all of this time you only find e-book that need more time to be read. General, Organic and Biological Chemistry can be your answer because it can be read by anyone who have those short free time problems.

Manda Perez:

A lot of book has printed but it differs. You can get it by world wide web on social media. You can choose the top book for you, science, comedy, novel, or whatever by searching from it. It is referred to as of book

General, Organic and Biological Chemistry. You can contribute your knowledge by it. Without leaving behind the printed book, it may add your knowledge and make you happier to read. It is most crucial that, you must aware about book. It can bring you from one place to other place.
