## **Beyond Imported Magic: Essays on Science, Technology, and Society in Latin America (Inside Technology) From The MIT Press**

The essays in this volume study the creation, adaptation, and use of science and technology in Latin America. They challenge the view that scientific ideas and technology travel unchanged from the global North to the global South -- the view of technology as "imported magic." They describe not only alternate pathways for innovation, invention, and discovery but also how ideas and technologies circulate in Latin American contexts and transnationally. The contributors' explorations of these issues, and their examination of specific Latin American experiences with science and technology, offer a broader, more nuanced understanding of how science, technology, politics, and power interact in the past and present.

The essays in this book use methods from history and the social sciences to investigate forms of local creation and use of technologies; the circulation of ideas, people, and artifacts in local and global networks; and hybrid technologies and forms of knowledge production. They address such topics as the work of female forensic geneticists in Colombia; the pioneering Argentinean use of fingerprinting technology in the late nineteenth century; the design, use, and meaning of the XO Laptops created and distributed by the One Laptop per Child Program; and the development of nuclear energy in Argentina, Mexico, and Chile.

## Editorial Review

### Review

At one level the term 'beyond imported magic' situates this collection as a contribution to the critique of the traditional North-South diffusionist stories of science and technology, but at another level the essays take the reader beyond the 'imported magic' of Northern theories of STS. By connecting us with the reflexive and critical voices of Latin American STS scholarship, this book is a great introduction to contemporary modes of rethinking STS from Latin American perspectives.

(David J. Hess, Sociology, Vanderbilt University)

This astonishing collection provides for both science and technology studies and postcolonial students and scholars valuable new pathways for thinking and illuminatingly different conceptual approaches. These authors usher in a much-needed expansive era for historians, philosophers, sociologists, political theorists, and ethnographers of science as well as for readers in other fields. I can't wait to teach it.

(Sandra Harding, Distinguished Professor, Departments of Education and Gender Studies, University of California, Los Angeles; Distinguished Affiliate Professor, Department of Philosophy, Michigan State University; and author of *Sciences from Below*)

In this enchanting book, leading scholars conjure up surprising and gripping new configurations of science and technology in Latin America. These essays reveal brilliantly how local and regional histories haunt so-called global scientific projects. *Beyond Imported Magic* brings Latin America into contemporary conversations about what makes technoscience appear so worldly and cosmopolitan, even as it is experienced as situated and place-bound in practice. This book will cast a spell on anyone who wants to understand the multiple ways in which we try, and often fail, to be both modern and global.

(Warwick Anderson, University of Sydney, author of *The Collectors of Lost Souls*)

This exciting and thought-provoking volume shows how analyzing Latin America through an STS lens allows us to peer more closely at known histories and uncover new and in some cases existing but understudied connections. Once we divest ourselves of outdated adjectives such as 'peripheral' to explain the role of Latin America in science we invariably begin to see the region as a center with a long history of scientific production and with the many complexities that this entails. By placing Latin America into longer narratives of (redefined or reemphasized) scientific research, the authors crucially demonstrate science as ever-present and not a relatively new, imported phenomena of the nineteenth/twentieth centuries.

(Gabriela Soto Laveaga, author of *Jungle Laboratories: Mexican Peasants, National Projects, and the Making of the Pill*)

As a former Maya archaeologist and science historian, this reviewer was always looking for a text such as this! The contributions to scholarship by these editors and contributors help break down the Anglocentrism

in the history and sociology of science and technology... Highly recommended.

#### About the Author

Eden Medina is Associate Professor of Informatics and Computing at Indiana University Bloomington and the author of *Cybernetic Revolutionaries: Technology and Politics in Allende's Chile*. Ivan da Costa Marques is Associate Professor in the graduate school of História das Ciências e das Técnicas e Epistemologia (HCTE) at Universidade Federal do Rio de Janeiro. Christina Holmes is Adjunct Professor in the Department of Anthropology at St. Francis Xavier University, Antigonish, Nova Scotia.

### Users Review

#### From reader reviews:

##### **Tammi Kendrick:**

Have you spare time for the day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity regarding spend your time. Any person spent their spare time to take a walk, shopping, or went to typically the Mall. How about open as well as read a book eligible Beyond Imported Magic: Essays on Science, Technology, and Society in Latin America (Inside Technology)? Maybe it is to be best activity for you. You realize beside you can spend your time along with your favorite's book, you can cleverer than before. Do you agree with the opinion or you have additional opinion?

##### **Joseph Sutton:**

As people who live in the modest era should be change about what going on or information even knowledge to make these individuals keep up with the era and that is always change and move ahead. Some of you maybe will probably update themselves by studying books. It is a good choice for you but the problems coming to an individual is you don't know what type you should start with. This Beyond Imported Magic: Essays on Science, Technology, and Society in Latin America (Inside Technology) is our recommendation to cause you to keep up with the world. Why, because book serves what you want and wish in this era.

##### **Millard Espinoza:**

Nowadays reading books become more and more than want or need but also be a life style. This reading addiction give you lot of advantages. The huge benefits you got of course the knowledge the rest of the information inside the book that improve your knowledge and information. The information you get based on what kind of book you read, if you want send more knowledge just go with knowledge books but if you want feel happy read one together with theme for entertaining like comic or novel. Often the Beyond Imported Magic: Essays on Science, Technology, and Society in Latin America (Inside Technology) is kind of book which is giving the reader unpredictable experience.

**Donna Willeford:**

Information is provisions for those to get better life, information today can get by anyone from everywhere. The information can be a understanding or any news even restricted. What people must be consider while those information which is in the former life are challenging be find than now is taking seriously which one works to believe or which one often the resource are convinced. If you get the unstable resource then you buy it as your main information you will see huge disadvantage for you. All of those possibilities will not happen inside you if you take Beyond Imported Magic: Essays on Science, Technology, and Society in Latin America (Inside Technology) as your daily resource information.
