Guns, Germs, and Steel: The Fates of Human Societies By Jared Diamond Ph.D.

"Fascinating.... Lays a foundation for understanding human history."?Bill Gates

Winner of the Pulitzer Prize, *Guns, Germs, and Steel* is a brilliant work answering the question of why the peoples of certain continents succeeded in invading other continents and conquering or displacing their peoples. This edition includes a new chapter on Japan and all-new illustrations drawn from the television series. Until around 11,000 BC, all peoples were still Stone Age hunter/gatherers. At that point, a great divide occurred in the rates that human societies evolved. In Eurasia, parts of the Americas, and Africa, farming became the prevailing mode of existence when indigenous wild plants and animals were domesticated by prehistoric planters and herders. As Jared Diamond vividly reveals, the very people who gained a head start in producing food would collide with preliterate cultures, shaping the modern world through conquest, displacement, and genocide. The paths that lead from scattered centers of food to broad bands of settlement had a great deal to do with climate and geography. But how did differences in societies arise? Why weren't native Australians, Americans, or Africans the ones to colonize Europe? Diamond dismantles pernicious racial theories tracing societal differences to biological differences. He assembles convincing evidence linking germs to domestication of animals, germs that Eurasians then spread in epidemic proportions in their voyages of discovery. In its sweep, *Guns, Germs and Steel* encompasses the rise of agriculture, technology, writing, government, and religion, providing a unifying theory of human history as intriguing as the histories of dinosaurs and glaciers. 32 illustrations

Editorial Review

Amazon.com Review

Explaining what William McNeill called *The Rise of the West* has become the central problem in the study of global history. In *Guns, Germs, and Steel* Jared Diamond presents the biologist's answer: geography, demography, and ecological happenstance. Diamond evenhandedly reviews human history on every continent since the Ice Age at a rate that emphasizes only the broadest movements of peoples and ideas. Yet his survey is binocular: one eye has the rather distant vision of the evolutionary biologist, while the other eye--and his heart--belongs to the people of New Guinea, where he has done field work for more than 30 years.

From Library Journal

Most of this work deals with non-Europeans, but Diamond's thesis sheds light on why Western civilization became hegemonic: "History followed different courses for different peoples because of differences among peoples' environments, not because of biological differences among peoples themselves." Those who domesticated plants and animals early got a head start on developing writing, government, technology, weapons of war, and immunity to deadly germs. (LJ 2/15/97)

From Kirkus Reviews

MacArthur fellow and UCLA evolutionary biologist Diamond (The Third Chimpanzee, 1992, etc.) takes as his theme no less than the rise of human civilizations. On the whole this is an impressive achievement, with nods to the historians, anthropologists, and others who have laid the groundwork. Diamond tells us that the impetus for the book came from a native New Guinea friend, Yali, who asked him, ``Why is it that you white people developed so much cargo and brought it to New Guinea, but we black people had little cargo of our own?'' The long and short of it, says Diamond, is biogeography. It just so happened that 13,000 years ago, with the ending of the last Ice Age, there was an area of the world better endowed with the flora and fauna that would lead to the take-off toward civilization: that valley of the Tigris and Euphrates rivers we now call the Fertile Crescent. There were found the wild stocks that became domesticated crops of wheat and barley. Flax was available for the development of cloth. There was an abundance of large mammals that could be domesticated: sheep, goats, cattle. Once agriculture is born and animals domesticated, a kind of positive feedback drives the growth toward civilization. People settle down; food surpluses can be stored so population grows. And with it comes a division of labor, the rise of an elite class, the codification of rules, and language. It happened, too, in China, and later in Mesoamerica. But the New World was not nearly as abundant in the good stuff. And like Africa, it is oriented North and South, resulting in different climates, which make the diffusion of agriculture and animals problematic. While you have heard many of these arguments before, Diamond has brought them together convincingly. The prose is not brilliant and there are apologies and redundancies that we could do without. But a fair answer to Yali's question this surely is, and gratifyingly, it makes clear that race has nothing to do with who does or does not develop cargo. From reader reviews:

Clara Lee:

What do you with regards to book? It is not important together with you? Or just adding material when you require something to explain what yours problem? How about your time? Or are you busy person? If you don't have spare time to accomplish others business, it is make you feel bored faster. And you have time? What did you do? Everybody has many questions above. They have to answer that question simply because just their can do in which. It said that about book. Book is familiar in each person. Yes, it is proper. Because start from on jardín de infancia until university need this kind of Guns, Germs, and Steel: The Fates of Human Societies to read.

Latasha Hisle:

This Guns, Germs, and Steel: The Fates of Human Societies book is simply not ordinary book, you have after that it the world is in your hands. The benefit you obtain by reading this book is definitely information inside this publication incredible fresh, you will get details which is getting deeper an individual read a lot of information you will get. This Guns, Germs, and Steel: The Fates of Human Societies without we understand teach the one who studying it become critical in thinking and analyzing. Don't be worry Guns, Germs, and Steel: The Fates of Human Societies can bring whenever you are and not make your handbag space or bookshelves' turn out to be full because you can have it in the lovely laptop even telephone. This Guns, Germs, and Steel: The Fates of Human Societies having very good arrangement in word along with layout, so you will not sense uninterested in reading.

Rickie Miller:

As a college student exactly feel bored for you to reading. If their teacher asked them to go to the library as well as to make summary for some e-book, they are complained. Just very little students that has reading's spirit or real their hobby. They just do what the trainer want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that looking at is not important, boring and can't see colorful pics on there. Yeah, it is to get complicated. Book is very important for yourself. As we know that on this age, many ways to get whatever you want. Likewise word says, many ways to reach Chinese's country. Therefore , this Guns, Germs, and Steel: The Fates of Human Societies can make you sense more interested to read.

Joann Nixon:

Guide is one of source of knowledge. We can add our information from it. Not only for students but additionally native or citizen need book to know the update information of year to help year. As we know those ebooks have many advantages. Beside we all add our knowledge, may also bring us to around the world. From the book Guns, Germs, and Steel: The Fates of Human Societies we can take more advantage. Don't you to be creative people? To become creative person must choose to read a book. Merely choose the best book that ideal with your aim. Don't become doubt to change your life with that book Guns, Germs, and Steel: The Fates of Human Societies. You can more attractive than now.
