Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis) By Gabriele Centi, Fabrizio Cavani, Ferruccio Trifirò

Selective Oxidation by Heterogeneous Catalysis covers one of the major areas of industrial petrochemical production, outlining open questions and new opportunities. It gives keys for the interpretation and analysis of data and design of new catalysts and reactions, and provides guidelines for future research.

A distinctive feature of this book is the use of concept by example. Rather than reporting an overview of the literature results, the authors have selected some representative examples, the in-depth analysis of which makes it possible to clarify the fundamental, but new concepts necessary for a better understanding of the new opportunities in this field and the design of new catalysts or catalytic reactions. Attention is given not only to the catalyst itself, but also to the use of the catalyst inside the process, thus evidencing the relationship between catalyst design and engineering aspects of the process.

This book provides suggestions for new innovative directions of research and indications on how to reconsider the field of selective oxidation from different perspectives, outlining that is not a mature field of research, but that new important breakthroughs can be derived from fundamental and applied research. Suggestions are offered on how to use less conventional approaches in terms of both catalyst design and analysis of the data.

Editorial Review

Review

'The authors set out to accomplish two challenging goals in the writing of this book and they successfully accomplished both of them. Their first goal was to give examples of important, representative new catalytic oxidations and to consider them in a way that could lead to greater understanding of these reactions so that this insight might provide better design of catalytic oxidation processes. The second goal that the authors set out was to take a fresh look at long established ideas and concepts, to ascertain their limitations and, by so doing delineate guidelines for future research.'

Although the authors state, early on, that their goal is not to provide a comprehensive review of new oxidation process technology, they do a fine job of doing just that. Almost all new, and many established heterogeneous catalytic oxidation process technologies are covered at some point in this volume. Along with some aspects of olefin epoxidation, aromatic hydroxylation and others, detailed descriptions of nearly all aspects of the heterogeneous catalytic oxidation and ammoxidation of alkanes, alkenes and alkyl aromatics are provided from many different points of view including the catalysts, reaction conditions, applications, process concepts, reactor design and mechanisms. The authors also highlight the enormous contributions made by catalytic oxidation technology to the chemical industry, noting that more than half the products made using catalytic processes and nearly all the monomers used for the production of fibers and plastics are obtained through selective oxidation.

I recommend it to all who are working in the field of catalysis, especially those in the area of catalytic oxidation or anyone who is contemplating entering this field. It will be a worthwhile addition to the library of those interested in catalytic oxidation, not only as a reference work full of important information, but as a stimulating compendium of ideas that can focus one's approach on exciting new areas of oxidation catalysis in order to design new and useful chemical processes.

In conclusion, this volume is well written, informative, interesting, and thought provoking. It will be a valuable addition to the literature of heterogeneous catalytic oxidation.'

Dr. James E. Lyons in Cattech Journal, 5:2 (2001)

Users Review

From reader reviews:

Dorothy Marr:

Now a day people who Living in the era everywhere everything reachable by connect to the internet and the resources within it can be true or not demand people to be aware of each details they get. How a lot more to be smart in getting any information nowadays? Of course the answer is reading a book. Reading through a book can help men and women out of this uncertainty Information particularly this Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis) book as this book offers you rich information and knowledge. Of course the knowledge in this book hundred per cent guarantees there is no doubt in it you probably know this.

Christine Curnutt:

Reading a e-book can be one of a lot of pastime that everyone in the world loves. Do you like reading book

therefore. There are a lot of reasons why people enjoy it. First reading a guide will give you a lot of new details. When you read a publication you will get new information since book is one of numerous ways to share the information or even their idea. Second, examining a book will make you actually more imaginative. When you examining a book especially hype book the author will bring you to definitely imagine the story how the people do it anything. Third, you could share your knowledge to other people. When you read this Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis), you may tells your family, friends and soon about yours reserve. Your knowledge can inspire the others, make them reading a guide.

Rhonda Silva:

Your reading 6th sense will not betray a person, why because this Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis) publication written by well-known writer who knows well how to make book that can be understand by anyone who read the book. Written throughout good manner for you, still dripping wet every ideas and composing skill only for eliminate your current hunger then you still skepticism Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis) as good book not just by the cover but also with the content. This is one book that can break don't evaluate book by its deal with, so do you still needing an additional sixth sense to pick this kind of!? Oh come on your reading sixth sense already told you so why you have to listening to one more sixth sense.

Susan Gaier:

Don't be worry in case you are afraid that this book will probably filled the space in your house, you may have it in e-book way, more simple and reachable. That Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis) can give you a lot of buddies because by you taking a look at this one book you have matter that they don't and make you more like an interesting person. This kind of book can be one of one step for you to get success. This publication offer you information that perhaps your friend doesn't learn, by knowing more than different make you to be great individuals. So , why hesitate? Let's have Selective Oxidation by Heterogeneous Catalysis (Fundamental and Applied Catalysis).
